Bigdata-配置加解密

Bigdata 加密 设计 架构

jasypt 的解决方案

1. Maven依赖

```
<groupId>com.github.ulisesbocchio
       <artifactId>jasypt-spring-boot-starter</artifactId>
   <version>2.1.0
</dependency>
```

2. 配置

```
password: boss #根密码
```

3. 调用JAVA API 生成密文

```
public class BosxAdminApplicationTest {
    public void testEnvironmentProperties() {
        System.setProperty("jasypt.encryptor.password", "boss");
        StringEncryptor stringEncryptor = new DefaultLazyEncryptor(new St
andardEnvironment());
        System.out.println(stringEncryptor.encrypt("123456"));
        System.out.println(stringEncryptor.decrypt("VZ5XhsD3fxa+1NxkSmwp4
w=="));
```

4. 配置文件中使用密文

datasource:

password: ENC(密文)

xxx: ENC(密文)
